

## Seats

A seat is a sturdy, sturdy surface to sit upon, typically raised above floor level. Typically used by one person, nearly all seats are supported by four legs, even though several could be in a triangular shape with only three legs. A stool is a kind of seat that does not have any arm rests or a back rest. A kind of seat which has folding action and an inclining footrest is known as a recliner, whereas a seat together with arms only is considered an arm seat. If a seat has connected wheels, it can be called a wheelseat and if the seat is hung from above, it is known as a swing. A permanently attached seat in a theatre or a train is referred to as a seat or airline seat, yet when riding; it is a saddle as in bicycle saddle. A car seat is the kind utilized within automobiles and an infant car seat will be a kind of seat specially meant for little children.

The design of the seat could vary rather considerably to accommodate several aesthetic tastes and requirements. As an example, designs could be decorated with drilled openings, can include low backs or gaps for ventilation or be made of porous materials. The seat back may be designed as an included headrest by way of extending the height over the occupant's head. Seats could be constructed together with an attached, built in footrest or come with a separate matching ottoman. An ottoman is a short stool which is designed to be used as a movable footrest. From time to time the ottoman can be connected to a glider chair with swing arms, allowing the ottoman to rock back and forth together with the glider similar to a rocking chair along with a built-in footrest.

Covers utilized for seats are temporary fabric wraps offering protections against wear or to offer better aesthetics. Currently accessible there are a broad range of seat covers from neoprene to leather. More formal materials could be rented for occasions like for example weddings to be able to increase the decoration. Several seat covers have decorative seat ties or ribbons attached to be tied behind the seat in a bow or decorative knot. Some individuals use customized clear plastic furniture covers so as to protect their expensive sofas and seats.

Seat pads provide cushioning for hard seats, although some are normally decorative. Several can even be used to be able to add to a driver's height within vehicles. Furthermore, orthopaedic backrests offer lumbar and lower spine support. Some manufacturers have their seat pad designs patented and are recognized by some medical organizations. Several of the newer car seats obtainable are equipped with built-in and adjustable lumbar supports so as to offer extra ease to passengers and drivers of the vehicle.
